

GAURAV SINGH BHATI

Udaipur, Rajasthan 313003 | +91 7425841804 | gauravbhati2099@gmail.com

SUMMARY

AI Engineer and Backend Developer with experience building LLM-powered applications, retrieval systems, workflow orchestration platforms, and natural-language database interfaces. Developed scalable backend services using Python, FastAPI, MongoDB, and LangGraph, with expertise in memory architectures, authorization workflows, asynchronous processing, and observability. Experienced in designing production-style AI systems integrating conversational intelligence, retrieval, document processing, and workflow automation.

SKILLS

Core AI & Backend	Engineering & Operations
LLMs and prompt engineering	OpenTelemetry for observability
NLP and semantic search	Git and GitHub version control
Retrieval augmented generation (RAG)	Workflow orchestration techniques
Vector retrieval strategies	System design principles
FastAPI and Flask frameworks	Authorization systems management
REST APIs and asynchronous processing	Logging and monitoring practices
MongoDB, SQL, and NoSQL databases	Python and C++ programming
ETL pipelines development	Data analysis and visualization

EXPERIENCE

AI Engineer Intern | 06/2026 – Current

ONEPWS Pvt. Ltd.

- Designed and developed a workflow-driven intelligent assistant platform integrating conversational AI, persistent memory, document processing, authorization, and natural-language database querying.
- Architected LangGraph-based workflows for identity resolution, access control, memory retrieval, workflow routing, document requests, and conversational response generation.
- Implemented a long-term memory management system supporting extraction, review, storage, ranking, retrieval, deduplication, expiry handling, and audit workflows.
- Developed a schema-aware MongoDB query engine capable of translating natural-language requests into validated and authorized database operations.

- Engineered asynchronous processing pipelines for memory extraction and document workflows to reduce synchronous request overhead.
- Implemented observability and distributed tracing using OpenTelemetry, structured logging, telemetry collection, and operational monitoring.
- Designed extensible workflow architectures supporting multiple business processes and automation scenarios.

Technologies: Python, FastAPI, MongoDB, LangGraph, Redis, OpenTelemetry

AI Research Intern | 12/2025 – 02/2026

Tech Adaptive Pandit Pty Ltd.

- Conducted comparative analyses of model performance using structured testing methodologies to inform model improvements.
 - Uncovered model limitations through edge-case testing and failure-mode analysis, enabling targeted performance enhancements.
 - Developed evaluation frameworks assessing reliability, consistency, and response quality in machine learning and LLM-based systems.
 - Conducted literature reviews, experimentation, and technical research supporting AI-focused initiatives.
-

PROJECTS

Intelligent Customer Support Platform

Python, FastAPI, MongoDB, LangGraph, Redis, LLMs

Long-term memory architecture, identity resolution and authorization, conversational workflow orchestration, document request automation, natural-language MongoDB querying, asynchronous background processing, observability and telemetry integration.

Natural Language MongoDB Query Engine

Python, MongoDB, LLMs

Natural-language query planning, dynamic schema understanding, authorization-aware execution, query validation and safety checks, multi-stage planning architecture.

RAG Policy Assistant

Python, FastAPI, Vector Retrieval, RAG

Document ingestion pipeline, semantic retrieval, relevance ranking, citation-aware responses, context-aware generation.

YouTube Sentiment Analysis Platform

Flask, React, NLP

NLP-based classification, analytics dashboards, API-driven inference workflows, large-scale comment processing.

PlaylistAI

Flask, Spotify API, YouTube Data API, Ollama

Built a playlist conversion platform enabling migration between YouTube and Spotify playlists through metadata extraction and automated track matching.

EDUCATION

Bachelor of Technology (B.Tech) Computer Science and Engineering

Geetanjali Institute of Technical Studies Udaipur, Rajasthan

Expected Graduation: 08/2027
